

SOLID WALL INSULATION

FACTSHEET

SOLID WALL INSULATION CAN SAVE UP TO £400 PER YEAR OFF YOUR HEATING BILL

Properties built before the 1930s or built with concrete have solid walls - these types of properties do not contain a cavity.

The only way to insulate this kind of property is with solid wall insulation.

THE BENEFITS

- Save up to £400 per year on your heating bill
- Retain up to 45% of your household heat
- Greater warmth and improved comfort
- It helps to reduce condensation and mould
- Gives your home a fresh new look and can increase the value of your property

TIMESCALE

The whole process will take 4 to 6 weeks, depending on the weather.

TURNOVER TO LEARN MORE ABOUT THE INSTALLATION PROCESS

HOW DOES IT WORK?

- External solid wall insulation goes on the outside of the walls.
- It may be necessary for VolkerLaser to erect scaffold on and around the perimeter of your property.
- All fixtures and fittings (e.g rainwater downpipes, waste pipes, gas pipes & flues, satellite dishes, exterior lights) will be temporarily removed or extended by the contractor, VolkerLaser, to allow the works to be carried out. Satellite dishes and aerials are fitted to the outside of scaffold to ensure you will always be able to view your televisions
- Rigid boards of insulation will then be fitted with adhesive and mechanical fixings onto the exterior of the property.
- New PVC over sills will be fitted to all necessary window openings.
- Mesh re-enforced render coats are applied onto the boards and allowed to dry. Once this has cured, VolkerLaser apply the finish coat render.
- All items removed to allow works to take place will be fitted back to original wall points.
- And finally gates, fences etc will be adjusted and fitted back as necessary.
- *Please note* any items that rest on the walls will need to be moved back e.g fences, sheds, shrubs. This will be discussed with you by a VolkerLaser Tenant Liaison Officer.
