

Press Release

26 October 2015

VolkerLaser awarded UK energy efficiency frameworks

VolkerLaser has been named as a preferred contractor on three major framework contracts offering energy efficient insulation solutions across the UK.

The Procurement for Housing, Warmworks and Fusion 21 frameworks have up to £50m worth of insulation work available which VolkerLaser will bid for alongside other preferred contractors. The inclusion of the company on these frameworks follows the award of the four year Fortis Living framework in 2014.

During the four year Procurement for Housing 'Renewables & Energy Efficiency framework', VolkerLaser will have the opportunity to deliver external wall, cavity wall, loft, internal and roof insulation to properties nationwide.

The Warmworks scheme will run for a minimum of five years as part of the Scottish Government's Home Energy Efficiency Programme. The framework will involve the installation of external, cavity wall, loft and floor insulation in properties across Scotland.

Fusion 21 is a social enterprise that promotes public procurement as a means to achieve value for money. During the four year contract, cavity wall and loft insulation will be installed in homes around the West and East Midlands.

Geoff Thomas, Director of Energy and Social Housing at VolkerLaser commented: "Our appointment on these new frameworks provides a huge opportunity to grow the energy and housing portfolio of VolkerLaser, ensuring that we can continue to tackle fuel poverty across both England and Scotland."

As part of their commitment to communities surrounding the works, VolkerLaser aims to utilise local labour wherever possible, as well as create opportunities for apprentices during the contracts.

VolkerLaser has extensive experience in delivering energy efficiency works to properties across the UK with nearly 5,000 homes insulated since 2014.

About VolkerLaser

VolkerLaser is the UK's leading multi-functional contractor, undertaking waterproofing, strengthening and repair to concrete, steel and brickwork structures; as well as delivering energy efficient solutions to private and social housing.

From its base in Worcester, the company solves all types of structural problems, specialist construction and civil engineering challenges; from concrete repairs to lime rendering, waterproofing to corrosion protection and from providing technical advice to the management of complex structural repairs or major civil engineering projects.

Working to PAS 2030 standards, VolkerLaser deliver energy saving insulation measures to tackle fuel poverty on large and small scale projects, specialising in both structural and non-structural systems.

VolkerLaser is part of VolkerWessels UK, a multi-disciplinary construction and civil engineering group with a turnover of c£747 million. VolkerWessels UK employs more than 2,400 staff in six operating companies. The group is the UK arm of Dutch based VolkerWessels; one of the largest construction groups in Europe.
